

CS 202: IT Workshop I

Assignment II (Group: GG3)

1. Write a Java program for the followings:

- a) To read a sentence entered from keyboard.
- b) To find and display the number of words in the entered sentence.
- c) To display the longest word.

You need to write separate methods for doing the operations.

2. Write a Java program to do the followings:

- a) To take a series of integers as input from keyboard and store in an array.
- b) To create another array and store only the even elements from the above array.
- c) To arrange the elements of the above array in reversed order.

Write separate methods for doing the operations and necessary inputs to the methods should be passed as parameter.

Notes:

- 1. You should not import any additional classes/packages other than Scanner class.
